Experience

Full Stack Developer

IplexSoft

June 2022 – May 2024

- Contributed to multiple client projects across different domains as a Full Stack Developer.
- Designed, developed, and maintained scalable web applications.
- Built RESTful APIs and responsive UI components.
- Optimized application performance and followed best coding practices.
- Continuously learned new technologies through real-world project challenges.

Full Stack Developer

Simplicore (US)

June 2024 – Present

- Working on production-level applications for US-based clients.
- Developing end-to-end features and integrating backend services.
- Participating in requirement analysis, code reviews, and performance optimization.
- Delivering high-quality, scalable solutions using modern frameworks and tools.

WordPress Developer

XoomMD

Jan 2026 – Present

- Developing and maintaining custom WordPress websites and themes.
- Implementing responsive designs and optimizing website performance.
- Integrating plugins, APIs, and third-party services.
- Ensuring website security, SEO optimization, and regular updates.

Projects

Consultant System

- Developed a platform allowing doctors to register profiles and users to book appointments.
- Implemented in-app meetings for direct doctor-patient consultations.
- Ensured seamless communication and user-friendly experience.

Work Opportunity Tax Credit (WOTC) System

- Built a system to calculate employee tax credits based on WOTC rules.
- Verified employee eligibility using survey responses.
- Implemented data scraping from Florida's WOTC database.
- Automated tasks using cron jobs for data updates and eligibility checks.

Maintenance Management System (Next.js – SaaS)

- Developed a SaaS platform for managing companies, locations, parts, and maintenance tasks.
- Implemented role-based access for admins and agents.
- Ensured strict data isolation between companies.

Learning Management System (Laravel)

- Led a team as Team Lead and managed Git workflows and code merging.
- Implemented admission processes, merit-based calculations, attendance, and rewards.

Logistics System (Laravel / Next.js)

- Implemented live location tracking and real-time data management.
- Developed radius-based rider matching functionality.

Artwork Sell Platform (Laravel / Next.js)

- Built an artwork marketplace for artists to sell their work.
- Implemented complete purchase flow and order management.
- Live: artabiasa.com

YouTube Clone

- Implemented video upload, likes, watch later, history, and authentication.
- Tech Stack: React, Tailwind CSS, Node.js, Express, MongoDB, Firebase.
- GitHub: Repository
- Live: my-tube1-1.vercel.app

Chat Application

- Developed a real-time chat application with media sharing.
- Implemented WebSocket communication using Socket.io.
- GitHub: Repository

Digital Board System

- Built a B2B platform for managing digital advertisement boards across locations and devices.
